ONE SW, DIFFERENT HW...
100% MADE IN ITALY & SYAC-TB TECHNOLOGY

...is also a control access

The **CONTROL ACCESS** function implemented in DigiEye systems, directly inside the machine, allows offering the maximum performance, security and flexibility.

The Syac-Tb control access provides high performance:

- Creating restricted areas
- Keeping the timetables
- People movement control

The SW, thanks to an intuitive user interface, is easy to use and allows you to create/change the settings , also to non-technical people.

It's also possible to control one user as an access, with fast research and settings.

In emergency cases, it's possible to identify where each person is in real time.

...is also a control access

When the number of users is very high, it is possible to use the clear tax code number: for schools, public institutions, gyms...

It is possible to manage some credits for different areas or users, and it allows up to 3 different settings:

- Subscription
- Registration
- Medical certificate

It is also possible to set the maximum number of daily access by user or by area: perfect for public areas as libraries....

Control and report the open gates according the settings

Based on **webserver**, allows a control of an unlimited areas.

Thanks to the **tree architecture**, it is possible to manager different branches geographically distributed.

Syac-Tb Control access functions

- **LICENCE:** embedded IN DigiEye.
- **MULTI USERS/MULTI BRANCHES:** multiple users can access to the Sw at the same time
- **REMOTE ACCESS:** remote management and maintenance
- **USER CREDENTIALS:** place / user association with separate profiling
- **REAL TIME:** acquisition of users data with no download
- **REMOTE OPENING:** remote gate control
- **ANTI-PASSBACK:** logical and temporal, provides maximum security
- **TAX CODE NUMBER READING:** magnetic swipe card
- **EXPIRY DATE CARDS**
- **CREDITS MANAGEMENT:** by user or access
- **REPORT:** exportable

Settings

SEPARATED TECHNICAL MANAGEMENT: restricted area for PW protected installation SETTINGS: all in SW.

ROUTING AND AUTOMATIC RESEARCH: readers are automatically detected and connected through LAN or bus

DIGITAL IN/OUT: configurable SW, each controller has 2 in +2 out programmable.

AUTO REGISTRATION: allows the data automatic registration

AUTOMATIC BACK-UP: internal redundant back up by LAN

OFF-LINE CONTROL: white list configurations

DIGIEYE DIGITAL I/O INTEGRATION

Physical access control

There are different technologies you can match to the access control system: PIN/RFID/MAGNETIC STRIP, that could be used indifferently.

DigiEye communicates with the gate control system through LAN or serial: serial bridge configuration.

The controllers could be connected to two readers to run separately entry and exit and this one will manage the primary and secondary relè exit.

All the configurations of the controller are set through SW DigiEye access control.

Features

The control access system is made up of SW, one or more remote access control and the readers

The access control transforms the reader communication standard into proprietary SW protocol

The access control:

- Provide record keeping of Entry/ Exit
- Aux. entry
- Button exit management
- Store the users white list to allow the entry in absence of any notification
