

SECURITY SOLUTIONS FOR **SPORT FACILITIES**

The problem of security in stadiums has become an ever-growing concern, progressively driving away some of the public.

THE CHALLENGE

Integration remains one of the biggest problems for physical security at stadiums. If security devices are not integrated into a cohesive solution, security gaps could be exploited.

THE SOLUTION

SYAC•TB products allow the implementation of an integrated multifunctional solution for the supervision and centralized control of the sensitive areas in sport facilities. SYAC•TB's state-of-the-art solution, user-friendly for law enforcement and stadium employees, allows the management of the global information flow between the surveying peripheries critically positioned both inside and outside the stadium, and the controlling centres supervising locally, territorially or even nationally the public order and security. SYAC•TB products being digital, allow better image quality, storage on long term memory devices and customized processing. The bigger stadiums have installed many cameras positioned indoor and outdoor, within and outside the playing field. In some cases, the police forces possess vans with on-board recording systems, in order to gather real time recording during patrolling and fights.

CONCLUSIONS...

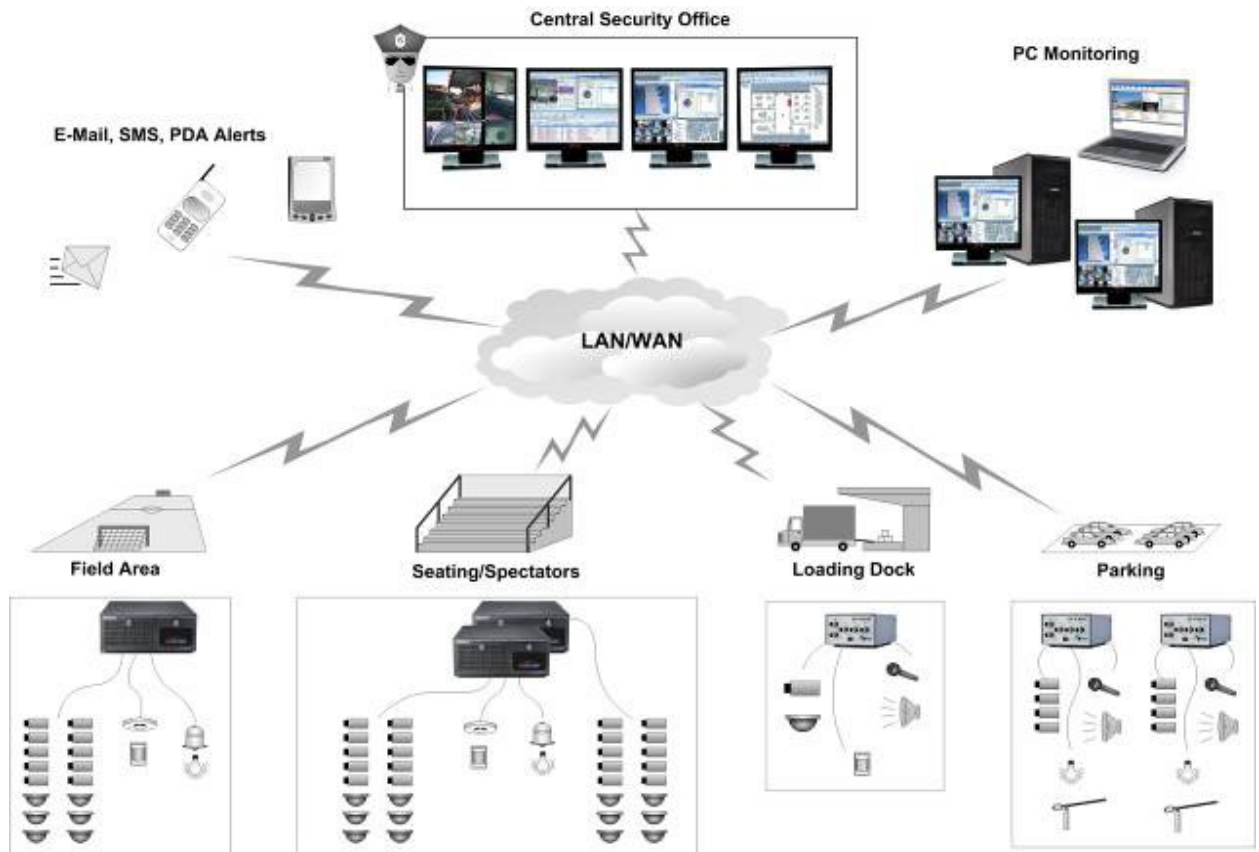

SYAC•TB products allow to:

- 1..receive and process in real time CCTV images
2. identify persons not permitted within the stadiums
3. identify alarmed positions on maps
4. visualize the alarmed images in real-time and/or in recordings
5. manage cameras (i.e. pan, tilt , zoom) from both fixed and mobile positions
6. centralize integrated security devices
7. audio/video communication with other control centres

... AND BENEFITS

SYAC•TB's centralized supervision systems allow the following functionalities to be performed simultaneously:

- acquisition, recording, transmission, playback of audio/video sequences
- multi-zones motion detection for each camera
- remote management of intruder, fire and access control systems
- WLAN, LAN/WAN, PSTN, ISDN, XDSL, GPRS, EMAIL, SMS, MMS and INTERNET transmission of text-audio-video files
- forwarding of alarmed calls to one or more control station (e.g. control centers, order forces, fire brigades, medical assistance, etc)
- identity verification for reserved areas (e.g. VIP grandstand, press room, changing rooms, parking, etc)

Digital recording is performed by modular workstations able to manage up to 16 cameras in Real Time.
 SYAC hi-tech products are already installed in numerous sport facilities both in Italy (**Bari, Bologna, Cagliari, Catania, Lecce, Livorno, Modena, Napoli, Palermo, Terni, Roma Olimpico, Roma Flaminio, Padova**) and other countries such as the Czech Republic, the Netherlands, Slovakia and the United Kingdom.
